SUMMARY

AI Trainer and Software Engineering student who has evaluated 1,000+ LLM outputs and shipped two full-stack ML projects in Python. Combines hands-on **Machine Learning**, **REST API**, and **microservices** experience with bilingual (Spanish/English) cross-cultural teamwork. Targeting Software Engineering / Machine Learning internships.

EDUCATION

Universidad Pedagógica y Tecnológica de Colombia (UPTC)

Tunja, Colombia

B.Sc. in Systems Engineering (equiv. Computer Science / Software Engineering)

Expected Dec 2027

- Relevant coursework: Applied Machine Learning, Software Engineering, Data Structures & Algorithms, Databases (SQL), Web & Backend Development.
- Active hands-on projects in Machine Learning and microservices (see Projects).

Colegio de Boyacá

Tunja, Colombia

High School Diploma

2021

EXPERIENCE

Outlier AI

Remote

AI Trainer — LLM Evaluation & Prompt Engineering

Apr 2025 – Aug 2026

- Improved LLM response quality across 500+ evaluations by designing and A/B-testing structured prompts and documenting recurring error patterns to guide reinforcement learning (RLHF) iterations.
- Ranked and corrected 1,000+ model completions feeding human-feedback datasets, contributing to measurable gains in model alignment and factual consistency.

Cultural Exchange Program (Work & Travel)

United States

International Team Member

Jun–Aug 2024 | Jun–Aug 2026

- Selected twice for a competitive international work program, returning in 2026 after a strong first season — a direct endorsement of reliability and work ethic.
- Thrived in a high-pressure, English-speaking workplace alongside a team of 7+ nationalities, solving daily operational challenges and proving adaptability far outside a comfort zone.
- Demonstrated the same fluent, real-world English used today in technical documentation and async collaboration.

PROJECTS

GoalPredict — ML Match-Prediction Web App

Personal Project

Python · XGBoost · FastAPI · React · Docker

2026 – Present

- Built a freemium web app predicting 2026 World Cup outcomes, reaching 54% validation accuracy *by training an XGBoost classifier in Python over 4 historical football datasets*.
- *Served predictions through a FastAPI REST backend to a React frontend, fully containerized with Docker and documented on GitHub.*

GoalQuest — Gamified Sports Platform

University Capstone (UPTC)

Python Microservice · React Native (Expo) · PostgreSQL · Docker

2025 – Present

- Built the Python microservice within a distributed microservices architecture, exposing REST APIs backed by PostgreSQL and containerized with Docker for reproducible deployment.

- Delivered the cross-platform React Native (Expo) interface in 2-week Agile/Scrum sprints, collaborating through a Git feature-branch workflow.

TECHNICAL SKILLS

Languages: Python, Java, C++, JavaScript, SQL, Golang

Web / Mobile: React, React Native (Expo), HTML, FastAPI, Springboot, CSS, REST APIs

ML / Data: Machine Learning, scikit-learn, XGBoost, pandas, Prompt Engineering, RLHF

Databases: PostgreSQL, MySQL, MongoDB

Tools: Git, GitHub, Docker, Agile/Scrum

LANGUAGES

Spanish — Native | English — Professional / Bilingual
